**2022-Ph-H1-Q23**

**Section: Electricity**

**Topic: Current, PD, Power, Resistance**

A resistor of resistance 4 Ω carries a current of 3 A. What is the power dissipated?

**Answer: B**

(36 W)

**Guidance for Students:**

Use the formula:

$$P = I^2 R = 3^2 \times 4 = 9 \times 4 = 36\,\mathrm{W}$$

**Revision Tips:**

- Three formulas: $P = IV,\ P = I^2 R,\ P = \frac{V^2}{R}$
- Pick the one that fits the values given
- Power is energy transferred per second
