

2. The polymerase chain reaction (PCR) is used to amplify DNA.
The diagram shows a primer attached to a single strand of DNA.

- (a) Name base 3. 1
- _____
- (b) PCR requires two primers. 2
- Explain why the two primers have different base sequences.
- _____
- _____
- _____
- _____
- (c) State a temperature used to allow primers to bind during PCR. 1
- _____ °C
