

16. A reaction was carried out at four different temperatures. The table shows the times taken for the reaction to occur.

Temperature (°C)	20	30	40	50
Time (s)	60	30	14	5

The results show that

- A a small rise in temperature results in a large increase in the rate of the reaction
- B the activation energy increases with increasing temperature
- C doubling the temperature of the reaction doubles the rate of the reaction
- D the reaction is slowing down with increasing temperature.
