

10. Cow's milk is mostly made up of water, with small amounts of fats and oils, proteins, sugars and other compounds. Milk is white because it contains small droplets of fats and oils that are dispersed in the water. It also contains small droplets of proteins.

The fats in the milk depend on what the cow eats — in summer the fats obtained from the milk have a higher melting point than those obtained from winter milk.

Milk goes off because of reactions involving the hydroxyl groups on the sugar molecules in milk.

Using your knowledge of chemistry, discuss the chemistry of cow's milk.
