

25. A titration experiment was carried out to determine the concentration of vitamin C in orange juice.

A sample of the orange juice solution was pipetted into a flask and 10 cm<sup>3</sup> water was added to dilute the sample. Starch indicator was added to the flask. The mixture was then titrated in the flask using iodine solution of known concentration.

Which line in the table shows the most appropriate apparatus to use when carrying out this procedure?

|   | To add water       | Type of flask    |
|---|--------------------|------------------|
| A | measuring cylinder | conical flask    |
| B | beaker             | conical flask    |
| C | measuring cylinder | volumetric flask |
| D | beaker             | volumetric flask |
