

6. Biodiesel is a fuel that can be made from plant oils and is a mixture of compounds.

(a) Oils are converted into biodiesel in a process called trans-esterification.

(i) One of the compounds in biodiesel is the ester shown.

State the systematic name for this ester.

1

(ii) Esters can be prepared in the laboratory by heating a carboxylic acid with an alcohol and a few drops of catalyst. Some of the reactants and products are volatile and flammable, so it is important to prevent vapours from escaping.

(A) Draw a labelled diagram to show apparatus suitable for preparing an ester.
