Section: Chemistry in Society

Topic: Experimental Techniques

Question summary

A burette was used for a titration. The start reading is 11.8 cm³, and the end reading is 24.3 cm³. What volume of solution was added from the burette?

Worked solution

Volume added = final reading - initial reading.

$$= 24.3 - 11.8.$$

Therefore, volume added = 12.5 cm³.

Final answer

C. 12.5 cm³

Revision tips

- Always subtract the initial burette reading from the final burette reading.
- Read the meniscus at eye level for accuracy.
- Burette scales increase downward, starting at zero at the top.
