

6. The graphic shown below is stored as a vector and as a bit-mapped graphic.

Both graphics have been scaled.

| Graphic A                                                                                                                      | Graphic B                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| A black silhouette of a person inside a circle, but the edges are jagged and pixelated, indicating it is a bit-mapped graphic. | A black silhouette of a person inside a circle with smooth, clean edges, indicating it is a vector graphic. |

- (a) Identify which graphic is the vector. Justify your answer.

1

---

---

- (b) State one advantage of using bit-mapped graphics compared to vector graphics.
