

2017-Ph-H1-Q10

Section: Our Dynamic Universe

Topic: The Expanding Universe

| What does the redshift of light from distant galaxies tell us?

Key Concept:

- **Redshift** means light waves are **stretched**
- This indicates galaxies are **moving away**
- Greater redshift = **greater distance** = **faster recession**

 **Final Answer: B — The galaxies are moving away from us**

Revision Tips:

- Redshift = evidence for the **expansion of the universe**
- Used in **Hubble's law**:

$$v = H_0 d$$
