

## 2017-Ph-H1-Q20

**Section:** Particles and Waves

**Topic:** Interference

| Light passes through a double slit. What is observed?

### **Key Concept:**

- Coherent light → interference pattern of **bright and dark fringes**
- Caused by constructive and destructive interference

 **Final Answer: B — Alternating bright and dark lines**

### **Revision Tips:**

- Fringes occur due to **path difference**
- Condition for bright fringe:

$$d \sin \theta = n\lambda$$
