

2017-Ph-H1-Q21

Section: Particles and Waves

Topic: Refraction of Light

| Light travels from glass to air at angle greater than critical angle. What happens?

 **Key Concept:**

If $i > \theta_c$, total internal reflection occurs.

So light is **reflected back** into the glass.

 **Final Answer: D — All the light is reflected**

 **Revision Tips:**

- Total internal reflection only when:
 - Travelling from **more to less dense**
 - $i > \theta_c$
 - $\sin \theta_c = \frac{n_2}{n_1}$
