Section: Our Dynamic Universe

Topic: Gravitation

A satellite moves in a circular orbit. What provides the centripetal force?

 **Key Concept:**

The centripetal force for an object in circular orbit is provided by **gravity**.

 **Final Answer: D — gravitational attraction**

 **Revision Tips:**

- In circular motion:

$$F = \frac{mv^2}{r}$$

- In orbit, this force is supplied by:

$$F = \frac{GMm}{r^2}$$
