

2018-Ph-H1-Q21

Section: Particles and Waves

Topic: Refraction of Light

Light passes from air into glass at an angle. Which property **decreases**?

- A. Frequency
- B. Speed
- C. Wavelength
- D. Amplitude

Solution:

- Frequency stays the same.
- **Speed decreases** when light enters a denser medium.
- Wavelength also decreases.
- Amplitude may decrease, but **speed** is the fundamental property that always changes.

Answer: B

Revision Tip:

When light enters a denser medium:

- Speed ↓
- Wavelength ↓
- Frequency stays the same
