Section: Our Dynamic Universe

Topic: Motion, Equations and Graphs

Which of the following statements is true about the motion of an object moving with constant velocity?

- A. Its acceleration is zero
- B. Its speed is decreasing
- C. It is changing direction
- D. It is not moving

Solution:

Constant velocity means:

- Constant speed and direction
- Therefore, no acceleration

Correct answer: **A**

Answer: A

Revision Tip:

Velocity includes direction. If velocity is constant, speed and direction are both unchanging, so acceleration is zero.
