
2019-Ph-H1-Q11

Section: Our Dynamic Universe

Topic: Motion, Equations and Graphs

Question:

An object starts from rest and accelerates uniformly at 2 m/s^2 for 6 s. What is the final velocity?

Answer:

Use $v = u + at = 0 + 2 \times 6 = 12 \text{ m/s}$

Correct Option: C (12 m/s)

Guidance for Students:

Identify initial velocity $u = 0$. Use the basic equation of motion and plug in carefully.

Revision Tips:

- Memorise the SUVAT equations
 - Know when to use $v = u + at$ vs. others
 - Always check whether the object starts from rest
-
