
2019-Ph-H1-Q12

Section: Particles and Waves

Topic: Spectra

Question:

Which type of spectrum is produced by a hot, glowing gas?

Answer:

A hot gas at low pressure emits a line emission spectrum.

Correct Option: B (Line emission)

Guidance for Students:

Think about gas discharge tubes (like sodium lamps). Each element emits its own unique spectral lines.

Revision Tips:

- Hot solid → continuous spectrum
 - Hot gas → line emission
 - Cool gas in front of continuous source → absorption spectrum
-
