
2019-Ph-H1-Q22

Section: Particles and Waves

Topic: Wave-Particle Duality

Question:

Which experiment provided strong evidence for the wave nature of electrons?

Answer:

Electron diffraction — electrons diffract through thin crystals and produce interference patterns.

Correct Option: B (Electron diffraction)

Guidance for Students:

Particles behaving like waves → key to quantum theory.

Revision Tips:

- Electrons = particles
 - Diffraction = wave behaviour
 - Other wave evidence: interference, superposition
-
