

2019-Ph-H1-Q3

Section: Particles and Waves

Topic: The Standard Model

Question:

Which of the following particles is not a baryon?

- A) Proton
- B) Neutron
- C) Sigma particle
- D) Electron
- E) Lambda particle

Answer:

The **electron** is not a baryon.

Baryons are made of three quarks. The electron is a **lepton**.

Correct Option: D

Guidance for Students:

Remember: protons, neutrons, and other three-quark combinations are baryons. Electrons are part of a different family.

Revision Tips:

- Baryons = 3 quarks
 - Mesons = 1 quark + 1 antiquark
 - Electrons are **leptons**, not made of quarks
 - Quarks never exist on their own in nature
-
