

2022-Ph-H1-Q13

Section: Our Dynamic Universe

Topic: Collisions, Explosions and Impulse

Two objects collide and stick together. What kind of collision is it?

Answer: A

(Perfectly inelastic)

Guidance for Students:

A collision where objects stick together is always perfectly inelastic — kinetic energy is **not** conserved, but **momentum is**.

Revision Tips:

- Elastic: KE and momentum conserved.
- Inelastic: momentum conserved, KE not.
- Perfectly inelastic = stick together.
