
2022-Ph-H1-Q16

Section: Particles and Waves

Topic: Nuclear Reactions

What is released during nuclear fusion?

Answer: B

(Energy)

Guidance for Students:

In both **fission** and **fusion**, mass is converted into energy according to Einstein's equation $E = mc^2$. Fusion powers stars and produces enormous amounts of energy.

Revision Tips:

- Fusion: light nuclei combine → energy released.
- More energy per unit mass than fission.
- Happens naturally in the Sun and stars.
