

2022-Ph-H1-Q5

Section: Our Dynamic Universe

Topic: Forces

A parachutist reaches terminal velocity. What forces act?

Answer: D (Weight = Air resistance)

Guidance for Students:

Terminal velocity is when forces balance: weight down = air resistance up. Acceleration is zero and speed is constant.

Revision Tips:

- Terminal velocity = balanced forces.
 - Weight and air resistance are equal and opposite.
 - No resultant force → no acceleration.
-
