

2022-Ph-H1-Q6

Section: Our Dynamic Universe

Topic: Forces

Which statement about Newton's third law is correct?

Answer: C

(The forces are equal in magnitude, opposite in direction and act on different objects.)

Guidance for Students:

Newton's third law is often misunderstood — it refers to **action–reaction pairs**, which act on **different** objects, not the same one.

Revision Tips:

- "Every action has an equal and opposite reaction."
- Forces act on **different** bodies.
- Same type of force (e.g. contact, gravitational).
