

2023-Ph-H1-Q17

Section: Particles and Waves

Topic: Refraction of Light

Light moves from air into glass. Which quantities decrease?

Answer: B

(Speed and wavelength)

Guidance for Students:

In denser mediums like glass:

- Light slows down (speed decreases),
- Wavelength shortens,
- Frequency stays the same.

Revision Tips:

- Speed down $\rightarrow$ wavelength down $\rightarrow$ frequency constant.
- Refraction index: $n = \frac{c}{v}$
- Snell's Law: $n_1 \sin \theta_1 = n_2 \sin \theta_2$
