

2023-Ph-H1-Q2

Section: Our Dynamic Universe

Topic: Forces, Energy and Power

A skydiver reaches terminal velocity. What is the net force acting on them at this point?

Answer: B

(Zero)

Guidance for Students:

Terminal velocity is reached when **air resistance equals weight**, so the forces are balanced and **acceleration is zero** — hence, net force = 0.

Revision Tips:

- Terminal velocity: no net force → constant velocity.
- Weight down = air resistance up.
- Newton's 1st Law: constant velocity when forces are balanced.
