

13. The use of analogies from everyday life can help improve the understanding of physics concepts.

A student describes how an office building with two floors can be used as an analogy for band theory in solid materials.

The student states:

'All the desks on the ground floor of the office must be occupied before workers can occupy a desk on the first floor. This represents an insulator.'

'The first floor is only unlocked when the ground floor is full.'

'When the whole office is full, no worker can change the desk that they are working at. This represents no current.'

Using your knowledge of physics, comment on this analogy.
