

13. A student makes the following statements about wave particle duality.
- I The photoelectric effect is evidence supporting the particle model of light.
  - II Interference is evidence supporting the wave model of light.
  - III Photons of sufficient energy can eject electrons from the surface of metals.

Which of these statements is/are correct?

- A I only
- B II only
- C III only
- D I and III only
- E I, II and III
