

24. A group of students carry out an experiment to investigate how quantity P depends on quantity Q.

The results of the experiment are plotted on the graph shown.

A physics textbook states that quantity P is directly proportional to quantity Q.

The students make the following statements about the line of best fit that should be drawn using all the data points plotted.

- I The line of best fit passes through the origin.
- II The line of best fit does not pass through the origin.
- III The line of best fit suggests the measurements have been affected by a systematic uncertainty.

Which of these statements is/are correct?

- A I only
- B II only
- C III only
- D I and III only
- E II and III only
