

9. The use of analogies from everyday life can help improve the understanding of physics concepts.

A group of students is discussing whether a vending machine can be used as an analogy for the photoelectric effect.

One student states “It’s like putting money into a vending machine. You won’t get your snack unless you have enough money, no matter how many coins you put in. If you put in too much money, your snack will come out of the vending machine and you will get change back.”

Using your knowledge of physics, comment on this analogy.
