

21. A capacitor is initially uncharged.

The capacitor is now charged for 20 s using a supply that provides a constant current of 0.10 mA.

The potential difference across the capacitor is now 12 V.

The energy stored in the capacitor is

- A 0.06 mJ
- B 12.0 mJ
- C 14.4 mJ
- D 24.0 mJ
- E 28.8 mJ.
